Introducing Oticon Intent™ featuring the world's first user-intent sensors

Helping clients engage in life like never before

Oticon Intent is the first hearing aid in the world to understand the user's natural behaviour and listening intentions, recognise when they change, and seamlessly adapt – by combining four types of sensor input.

Conversation activity

Monitoring if there is an active conversation or not informs the system to prioritise speech

Body movement

Physical movement sensors help anticipate the need for increased spatial awareness support

Head movement

Sensors monitor if and how the user moves their head to understand the type of communication situation

Acoustic environment

Sensors gather details of the 360° sound scene around the listener as it varies within listening environments and between environments

Sensor Driven
BrainHearing™
Technology

Packed with innovations to help your clients engage

A sleek new design makes Oticon Intent our smallest, most discreet rechargeable miniRITE style ever.

Bluetooth® LE Audio gives Oticon Intent future-proof, next-generation connectivity.

Intelligent miniFit Detect
- The world's first self-calibrating speaker gives up to 57% more precise gain.

Improved rechargeability
- more power than ever and 33% shorter charging time.*

Oticon Own Made for you

Why choose Oticon Own?

Deep Neural Network
The world's first in-the-ear hearing aid with an on-board Deep Neural Network.

Ultimate discreetness
Improved product design resulting in smaller sizes and ultimate discreetness.

Superior sound experience
The cutting-edge Polaris platform delivers a superior sound quality.

Built on BrainHearing™
In-the-ear hearing aids designed to support the brain's natural sound processing.

Connect seamlessly
Hands-free communication from iPhone, and direct streaming from iPhone, iPad, iPod touch, and Android™ devices thanks to Bluetooth® Low Energy technology.***

Filled with options
A complete range of styles, colours and prices to match your client's preferences.

The Oticon Own family

Oticon Own covers a complete family of three unique in-the-ear styles. The styles come with different battery sizes, output levels, colours, and price points.

Oticon Own IIC
(Invisible-in-the-Canal)

Oticon Own CIC
(Completely-in-the-Canal)

Oticon Own ITC
(In-the-Canal)

* Benefit may vary depending on style chosen.

** DNN is only available in Oticon Own 1.

*** Only available in styles with 2.4 GHz. See which hearing aids and devices are compatible here: oticon.global/compatibility

CROS / BiCROS							
Oticon CROS paired with a compatible Oticon hearing aid is a Contralateral Routing of Signal (CROS) amplification system. Sounds are picked up by the microphones in the CROS transmitter located on the poorer ear. Then, they are transmitted via Near-Field Magnetic Induction (NFMI) to a receiving hearing aid located on the better ear. If some hearing loss is present in the better ear, the solution is set up as a Bilateral Contralateral Routing of Signal (BiCROS) configuration. Compatibility : Intent, Real, More, Zircon, Opn S 1, Opn S 2, Ruby, Xceed, PG
